PROFESSIONAL SUMMARY

Frontend Developer with 2+ years of experience building scalable and production-ready web applications using Vue.js, Nuxt.js, React, and TypeScript. Experienced in developing enterprise dashboards, reusable UI component libraries, and business-critical systems, including interactive map-based applications. Strong focus on maintainable frontend architecture, reusable components, performance, and clean user experiences. Experienced working in Agile teams and collaborating with backend developers and business stakeholders.

PROFESSIONAL EXPERIENCE

Frontend Developer | Prodata LLC, Baku, Azerbaijan *04/2024 – Present*

Enterprise procurement, insurance, purchase order & fleet management systems

- Developed and maintained 6+ enterprise-level web applications using Vue.js, Nuxt.js, React, and TypeScript, serving 500+ internal business users across procurement, insurance, and fleet operations.
- Integrated REST APIs using Axios and TanStack Query, implementing data fetching, caching, and server-state management; reduced redundant network calls by 35% through query deduplication and cache invalidation strategies.
- Designed and maintained a shared UI component library with Storybook covering 40+ reusable components, cutting new-feature development time by roughly 30% and eliminating visual inconsistencies across 4 business applications.
- Designed and implemented scalable frontend architecture for multiple business modules, including procurement, insurance, purchase order, and fleet management systems, supporting 10+ concurrent feature teams without major refactors.
- Collaborated closely with backend developers and business stakeholders to translate business requirements into efficient and user-friendly frontend solutions, shipping releases on a 2-week sprint cadence.

Key Projects:

- **Insurance Management System —** Developed an interface for creating and managing insurance requests, supporting business workflows and accurate data handling; streamlined a 12-step manual process down to 5 guided steps, cutting average request-creation time by 45%.
- **Procurement Management Dashboard —** Built the frontend for a full-cycle procurement platform spanning vendor qualification, tender creation, commercial evaluation, and contract awarding; implemented dynamic multi-step forms with conditional validation to handle 15+ distinct request types across procurement categories.
- **Purchase Order Management System —** Implemented a dashboard for managing purchase orders with approval chains and real-time status tracking, reducing average order-approval turnaround from 3 days to under 1 day.
- **Fleet Management System —** Developed a real-time GIS fleet management platform supporting 1,300+ tracked vehicles, rendering live position updates from a WebSocket/STOMP feed processing thousands of sensor events per minute; used Leaflet clustering and Turf.js geospatial calculations to keep the map interactive at sub-second refresh with no dropped frames on high-density routes, and built route-drawing/editing tools for dispatch operators.

CORE SKILLS

Languages: JavaScript (ES6+), TypeScript

Frontend Frameworks: Vue.js, Nuxt.js, React

State Management: TanStack Query, Pinia, Vuex, React Hooks

UI & Styling: CSS, SASS, Tailwind CSS, Storybook

Mapping & Geospatial: Leaflet, Leaflet-Geoman, Turf.js, GeoJSON, geographiclib-geodesic

Tools & Workflow: Git, Jira, Agile Development

EDUCATION

Code Academy, Baku *09/2022 – 07/2023*
Diploma in Software Development

Azerbaijan State University of Economics *2014 – 2018*
Bachelor's in Finance

LANGUAGES

Azerbaijani (native) • Russian (native) • English (proficient)
